Professional Summary

Engineering Leader and Lead Software Engineer with 10+ years of experience building scalable, high-availability cloud platforms using Node.js, TypeScript, React, and AWS. Expert in designing distributed systems, microservices architectures, and event-driven platforms that process high-volume enterprise transactions. Proven record of owning system architecture, leading offshore engineering teams, and collaborating with cross-functional stakeholders to deliver reliable, fault-tolerant systems. Experienced in integrating AI/GenAI capabilities and data-driven platforms to improve automation and operational efficiency.

Technical Skills

Languages: JavaScript, TypeScript, SQL

Backend: Node.js, NestJS, Express.js, REST APIs, Microservices, Distributed Systems

Frontend: React.js, Angular, AngularJS, HTML, CSS, RxJS

Cloud & DevOps: AWS (Lambda, SQS, SNS, S3), Event-Driven Architecture, CI/CD Pipelines

Architecture: System Design, Scalability, High Availability, Fault Tolerance, API Design

Databases: MySQL, PostgreSQL, Oracle

AI / Data: AI-assisted development, GenAI tooling, Data visualization (Tableau)

Tools: Git, Jira, VS Code, Swagger/OpenAPI, **GitHub Copilot, Cursor AI, AI-assisted development tools**

Methodologies: Agile, Scrum, Test Automation, Continuous Integration

Professional Experience

SYNECHRON — Lead Technology

Apr 2024 – Present | Pune, India

- Architected and delivered scalable REST API platforms using Node.js and NestJS supporting enterprise claims processing workflows handling high-volume business

transactions.

- Designed distributed event-driven architecture using AWS Lambda, SQS, SNS, and S3 enabling asynchronous processing and improving workflow automation efficiency by **40%**.
- Implemented automated claim lifecycle management pipelines reducing manual processing and improving operational throughput.
- Built modular React UI components enabling business users to manage complex claims workflows with improved usability and faster processing.
- Provided **engineering leadership for offshore development team**, mentoring engineers, performing architecture reviews, and enforcing engineering best practices.
- Owned **technical architecture decisions** including API design, database schema optimization, and scalable service integration.
- Led **end-to-end deployment lifecycle** across Dev, UAT, and Production using structured CI/CD and release governance improving deployment reliability.
- Optimized MySQL and Oracle database queries and indexing strategies improving data retrieval performance by **30%**.
- Maintained high system reliability through resilient architecture patterns supporting **high availability and fault tolerance**.
- Used **AI-assisted code generation and refactoring** to design REST APIs, validation logic, and event-driven handlers for claims lifecycle processing.
- Leveraged **Copilot and Cursor for automated unit test generation, code suggestions, and documentation**, improving code quality and reducing manual effort.

COMPUMATRICE — Lead Software Engineer

Apr 2016 – Apr 2024 | Pune, India

- Led architecture and development of enterprise healthcare web and mobile platforms used by large healthcare providers and thousands of patients.
- Designed microservices-based backend systems using Node.js and NestJS enabling scalable and maintainable service-oriented architecture.
- Developed secure REST APIs supporting critical healthcare workflows including patient data access, appointments, and digital engagement services.
- Built highly responsive Angular and AngularJS front-end applications improving user experience and operational efficiency for healthcare staff.
- Integrated **Tableau analytics dashboards** within Angular platforms enabling data-driven insights and business intelligence reporting.
- Delivered hybrid mobile applications using Ionic for iOS and Android supporting cross-platform patient engagement solutions.
- Implemented PostgreSQL database optimization strategies improving data access performance and system reliability.
- Led engineering delivery for multiple enterprise projects while coordinating across product owners, QA teams, and client stakeholders.

- Resolved critical production incidents and implemented reliability improvements ensuring **high availability and platform stability**.
- Promoted modern engineering practices including Agile delivery, CI pipelines, automated testing, and code quality standards.

Key Projects

Enterprise Claims Processing Platform

Architected a scalable enterprise claims platform using Node.js, NestJS, and AWS event-driven architecture. Implemented automated claim lifecycle workflows, rule-engine integration, and asynchronous message processing using SQS and SNS to improve operational efficiency and system scalability.

Used **GenAI tools (GitHub Copilot, Cursor AI)** to accelerate development, generate API contracts, optimize microservices, and automate unit tests, improving delivery speed and reducing manual coding effort while maintaining high code quality

Healthcare Patient Engagement Platform

Developed a large-scale patient engagement application enabling appointment management, patient data access, and digital healthcare services. Platform built using Angular, Node.js, PostgreSQL, and hybrid mobile deployment using Ionic for iOS and Android.

Data Analytics & Insight Platform

Integrated Tableau dashboards with Angular enterprise applications enabling real-time business insights and improved decision making for healthcare stakeholders.

Engineering Leadership & Strengths

- Engineering Leadership & Mentoring
- Technical Architecture Ownership
- Stakeholder Management
- Scalable System Design
- Distributed Systems & Cloud Platforms
- Agile Delivery & Team Collaboration

Education

Bachelor of Engineering (Computer Science) Pune - 2015

Other

Achievements: Employee of the Month Award & Star Award (2 Times)

Languages: English, Hindi, Marathi
